

1                                   **TESTIMONY OF A. R. WATTS**  
2                                   **FOR**  
3  
4                           **THE PUBLIC SERVICE COMMISSION OF SOUTH CAROLINA**  
5  
6                           **DOCKET NO. 2002-2-E**  
7  
8                   **IN RE: SOUTH CAROLINA ELECTRIC & GAS COMPANY**  
9  
10                   **Annual Review of Base Rates for Fuel Costs**  
11  
12

13   **Q.   WOULD YOU PLEASE STATE YOUR NAME, BUSINESS ADDRESS AND**  
14       **OCCUPATION?**

15   **A.**   A. R. Watts, 101 Executive Center Drive, Columbia, South Carolina. I am employed  
16       by The Public Service Commission of South Carolina, Utilities Department, as Chief  
17       of Electric.

18   **Q.   PLEASE STATE YOUR EDUCATIONAL BACKGROUND AND**  
19       **EXPERIENCE.**

20   **A.**   I received a Bachelor of Science Degree in Electrical Engineering from the  
21       University of South Carolina in Columbia in 1976. I was employed at that time by  
22       this Commission as a Utilities Engineer in the Electric Department and was  
23       promoted to Chief of the Electric Department in August 1981. I have been in my  
24       current position since October 1999. I have attended professional seminars relating  
25       to electric utility rate design, and have testified before this Commission in  
26       conjunction with fuel clause, complaint, territorial assignment, Siting Act, and  
27       general rate proceedings.

28   **Q.   WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS**  
29       **PROCEEDING?**

30   **A.**   The purpose of my testimony is to summarize Staff's findings as set forth in the  
31       Utilities Department's portion of the Staff Report, and address the use of a proxy for  
32       the allowable fuel component of the Company's purchased power expenses.  
33

1 **Q. WHAT SPECIFIC AREAS WERE ENCOMPASSED BY**  
2 **STAFF'S EXAMINATION?**

3 **A.** The Utilities Department's examination of the Company's fuel operations consisted  
4 of a review of the Company's monthly operating reports, review of the currently  
5 approved adjustment for fuel costs tariff, and review of the Company's short-term  
6 projections of kilowatt-hour sales and fuel requirements.

7 **Q. DID STAFF EXAMINE THE COMPANY'S PLANT OPERATIONS FOR**  
8 **THE PERIOD?**

9 **A.** Yes, we reviewed the Company's operation of its generating facilities, including  
10 special attention to the nuclear plant operations, to determine if the Company made  
11 every reasonable effort to minimize fuel costs.

12 **Q. HAVE YOU DETERMINED THAT ANY SITUATIONS WARRANT**  
13 **DETERMINATION THAT THE COMPANY HAS ACTED**  
14 **UNREASONABLY IN OPERATING ITS FACILITIES AND THEREBY**  
15 **CAUSING ITS CUSTOMERS TO BE SUBJECT TO PAYING HIGHER**  
16 **FUEL COSTS?**

17 **A.** No. After returning to service on March 3, 2001 from an extended outage, the VC  
18 Summer nuclear station has operated very well during this review period, achieving  
19 an overall average capacity factor slightly in excess of 62 %.  
20 The Company's major unit's availability and capacity factors are shown on Utilities  
21 Department Exhibit No. 1.

22 **Q. WOULD YOU BRIEFLY EXPLAIN THE REMAINING UTILITIES**  
23 **DEPARTMENT'S EXHIBITS?**

24 **A.** Exhibit Nos. 2A and 2B show the Company's nuclear and fossil unit outages for the  
25 months of March 2001 through February 2002, listing the plants by unit, duration of  
26 the outage, reason for the outage, and corrective action taken. Exhibit No. 3 lists the  
27 Company's percentage Generation Mix by fossil, nuclear, and hydro for the period  
28 March 2001 through February 2002. Exhibit No. 4 reflects the Company's major  
29 plants by name, type of fuel used, average fuel cost in cents per KWH to operate, and  
30 total megawatt-hours generated for the twelve months ending February 2002.

1 Exhibit No. 5 shows a comparison of the Company's original retail megawatt-hour  
2 estimated sales to the actual sales for the period under review. Exhibit No. 6 is a  
3 comparison of the original fuel factor projections to the factors actually experienced  
4 for the twelve months ending February 2002. Exhibit No. 7 is a graphical  
5 representation of the data in Exhibit No. 6. Exhibit No. 8 is the Company's  
6 currently approved Retail Adjustment for Fuel Costs tariff. Exhibit No. 9 is a history  
7 of the cumulative recovery account. Exhibit No. 10A is a table of estimates for the  
8 cumulative recovery account balance for various base level fuel factors for the period  
9 ending April 2003 including the cumulative account under-recovery balance through  
10 April 2002 of \$35,689,898. This produces an overall recovery factor of 1.722 cents  
11 per kilowatt-hour that is estimated to result in an ending period over collected  
12 balance of \$17,298.

13 **Q. WOULD YOU PLEASE EXPLAIN THE PURCHASED POWER**  
14 **FUELPROXY PROPOSED BY THE CONSUMER ADVOCATE IN THE**  
15 **PRIOR CAROLINA POWER & LIGHT COMPANY FUEL REVIEW CASE**  
16 **HELD ON MARCH 20, 2002?**

17 **A.** In the previous review of base rates for fuel costs for Carolina Power & Light  
18 Company (CP&L), under Docket No. 2002-1-E, the Commission approved a fuel  
19 factor based on a 60% fuel allowance proxy applied to purchase power activity,  
20 where the specific fuel cost was not known. This proxy was based on a request by  
21 the Consumer Advocate per a Marketer Stipulation approved in North Carolina for  
22 utilities in North Carolina, and agreed to by CP&L. The Consumer Advocate  
23 supported this proposal by referencing the South Carolina fuel clause statute  
24 language which defined "fuel cost" as, and quoting, "the cost of fuel, fuel costs  
25 related to purchased power, and the cost of SO2 emission allowances as used and  
26 shall be reduced by the net proceeds of any sales of SO2 emission allowances by the  
27 utility (emphasis added)." See S.C. Code Ann. Section 58-27-865(A) (Supp.2001).  
28 He further stated, "It does not appear that any non-fuel cost portion of purchased  
29 power costs may be recovered under the fuel clause under South Carolina law." He

1       went on to request the use of only 60% of CP&L's purchased power costs where the  
2       specific fuel cost is not known.

3       **Q. DO YOU BELIEVE USE OF THIS PROXY FOR DETERMINING THE**  
4       **ALLOWABLE FUEL PORTION OF PURCHASED POWER EXPENSES IS**  
5       **THE MOST APPROPRIATE METHODOLOGY?**

6       **A.** I believe there is no question that the use of some type of proxy is not only  
7       reasonable and appropriate, but also consistent with the application of the South  
8       Carolina fuel clause statute. I believe the most realistic approach, consistent with the  
9       controlling guidelines should be applied in determining the best methodology for use  
10      in this situation. I do not believe that the 60% proxy fuel factor would be the most  
11      appropriate to use in this case. Just because it may be appropriate in another  
12      jurisdiction does not mean that it is also appropriate here. Since utilities have  
13      different operations, generation mix, and power requirements, it is reasonable to  
14      conclude that it is not necessarily appropriate to use the same proxy for every one,  
15      but rather a utility specific factor may be more precise and representative of actual  
16      experience. The current use of this generic 60% fuel proxy in North Carolina was  
17      based on a range of fuel cost to total energy cost for off-system sales for the utility  
18      companies in that State; included off-system sales for NC Power; and was based on  
19      data from some period prior to August of 2001. This generic factor is also variable,  
20      and prior to the current 60% level, the factor had been set at 70%. These facts and  
21      issues show some of the weaknesses and lack of applicability of this specific factor  
22      and methodology in this case.

23      **Q. PLEASE EXPLAIN HOW THE USE OF A PROXY IS CONSISTENT WITH**  
24      **THE SOUTH CAROLINA FUEL CLAUSE STATUTE.**

25      **A.** In addition to the language defining "fuel cost" there are other portions that provide  
26      further guidance and insight when applying the Act in specific instances. One area  
27      addresses the offsetting of cost of fuel recovered through sales of power to  
28      neighboring utilities against fuel costs to be recovered. See Section 58-27-865(E)  
29      (Supp. 2001). Another area spells out the rebuttable presumption of prudence in  
30      operation by a utility of its nuclear generation facilities with the attaining of a certain

1 level of production during the review period. See Section 58-27-865(F) (Supp.  
2 2001). Also, as I have indicated in prior fuel cases, in evaluating a utility's fuel costs  
3 under the Act, it is important to keep in mind language in section (F) pertaining to  
4 costs that can be disallowed. This section reads in part "...giving due regard to  
5 reliability of service, economical generation mix, generating experience of  
6 comparable facilities, and minimization of the total cost of providing service". I  
7 believe with this and the other language embodied in the Act, it is clear that the aim  
8 is to encourage the affected utility to operate its production system, including the  
9 purchase power option, in the most effective and efficient manner. This is in full  
10 concert with provision of electric service at the most reasonable and prudent rate,  
11 through minimization of the total cost of providing service. Consistent with this  
12 approach is the method Staff has been applying through the use of a monthly, utility  
13 specific avoidable fuel cost proxy for purchase power, where no specific fuel  
14 component was identified. This is also similar to the way the utility determines the  
15 most economical operation of its system by comparing the cost of its next available  
16 unit to the cost of purchasing the power required from another provider. A  
17 significant component of these comparisons is the cost of fuel to generate the power  
18 from the utility's own plant. I believe the objective should be to establish a proxy  
19 that most appropriately satisfies these operating criteria. As a matter of fact, this  
20 method of using the utility's avoided cost as a proxy for the fuel portion of the  
21 purchase power cost has been used for many years in determining the rate that a  
22 utility pays for power under certain contracts. These contracts are those between the  
23 utilities and Qualifying Facilities under the Public Utility Regulatory Policies Act of  
24 1978. This Commission has approved rates based on this methodology, which is  
25 required under PURPA.

26 Therefore, I believe continuation of the use of the prior proxy methodology which  
27 Staff has been using is the most appropriate and prudent, and is also consistent with  
28 the South Carolina fuel statute.

29 In this case, the Audit Department Staff calculated a proxy factor of 63% using a like  
30 methodology for South Carolina as presented in the testimony on Ms. Cherry. An

1 interesting observation of the North Carolina Stipulation is that a calculation  
2 resulting in a 63% ratio of fuel cost to total energy cost for off-system sales would  
3 have meant that the applicable proxy factor would have remained at 70% in this  
4 case.

5 **Q. WOULD YOU PLEASE EXPLAIN UTILITIES DEPARTMENT EXHIBIT**  
6 **NO. 10B?**

7 **A.** The Audit Department Staff provided a resulting cumulative under-recovery amount  
8 of \$27,089,403 as of April 2002, based on calculations using a 63% proxy factor for  
9 purchased power for the Company. In order to provide the Commission with the  
10 corresponding fuel factors resulting from application of this proxy fuel component  
11 factor, for facilitating a possible alternative decision, I have included the results on  
12 Exhibit 10 B. This Exhibit shows a breakeven point at approximately 1.677 cents per  
13 kilowatt-hour.

14 **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

15 **A.** Yes, it does.
